1. About DualEntry

A quick overview video about DualEntry: <https://vimeo.com/1136712041/83927f2201>

Founded in 2024, DualEntry is bringing AI to ERP software. Traditional accounting is manual and tedious - our platform automates these tasks to save finance teams thousands of hours and reduce costs.

We value speed, impact, and a focusing on the things that matter - this means fewer meetings and less bureaucracy no-nonsense work ethic. Our team consists of exceptional performers who work hard, take extreme ownership, and have fun along the way.

We've raised \$100M in funding since we started in June 2024 (we're a young company!). We just raised a \$90 million Series A round with Lightspeed Venture Partners and Khosla Ventures leading the round. Google Ventures (GV), Contrary, and Vesey Ventures also participated.

Helpful Resources:

- Our recent \$90M Series A feature in [Forbes](#)
- Our press release for our recent [Series A funding](#)
- Our [Youtube channel](#)
- The [opportunity of disrupting ERPs](#) (incl. Netsuite)
- Lightspeed's [write-up on their investment](#) in DualEntry

Founders

[Our founders](#) met during a computer science class and bootstrapped their first company to \$25 million in ARR within five years with just \$2,000 in savings. They later raised \$325 million, scaling to 250+ employees and \$100+ million in ARR before a successful exit.

DualEntry addresses one of their [biggest pain points from their entrepreneurial journey](#): inefficient accounting and ERP systems.

We're focused on building an outstanding product rather than planning an exit. Our goal is to create market-leading accounting software that transforms the industry through AI. Opportunities for an exit or IPO will follow naturally from our success.

The goal: when CFOs and finance teams think of ERP, they think of DualEntry.

This mindshare will lead to market share.

2. The Product

Current Status

To date we've built a solid core accounting ERP product targeting mid-market customers. We've also made a head start on specialized features to address core target industries - most recently launching advanced revenue recognition to serve SaaS businesses, complex multi-currency accounting features and specialized integrations for verticals such as self-storage.

Our first customers are coming up on a full year with DualEntry, and our inbound customer pipeline is rapidly growing. 2026 will be all about strengthening the product for existing users, rapidly onboarding new customers and building out exciting new features to address more complex user needs.

Roadmap

Accounting requires comprehensive features, which we've systematically built out since our inception less than 2 years ago. The product surface area is already huge and our roadmap is completely packed — that's why we're recruiting more exceptional team members!

Some of our 2026 roadmap highlights include:

- Specialized industry-specific integrations and accounting modules to unlock key verticals such as property management
- Adding enhanced AI & business intelligence features to enable finance teams to continue streamlining operations and bring value to their businesses in new ways
- Building out a brand new payments product to reduce payment processing costs, minimize off-platform friction and pass on savings to our users

Target Market & Compliance

We currently target mid-market enterprises, specifically software companies with at least \$10M in ARR. As the product grows, we plan to expand into targeted verticals and more complex businesses.

Our product adheres to GAAP and IFRS standards, and we'll be increasing supported features for international tax & financial reporting requirements.

Competition

Our main competitors are legacy systems built 25 years ago: Oracle NetSuite, Microsoft Dynamics, and Sage Intacct. Unlike these systems, DualEntry is built from scratch to leverage modern AI, providing automation and an intuitive user experience.

The legacy systems are huge: NetSuite alone has 10,000+ employees, revenues of \$3 billion per year, and is valued at \$30+ billion (started in the late 1990s).

These providers rely extensively on external consultants to scope integrations, migrate data and train finance teams on complicated and outdated systems. We've built a powerful migration engine allowing NextDay Data Migration, and an intuitive platform that reduces training time. We're about to launch self-service onboarding & data migration - allowing our customers to achieve in hours what takes months to years with legacy providers.

Customer Feedback

Customer feedback has been extremely positive.

Our best indicator of success: customers are referring new clients to us.

We're receiving 5-star reviews on G2.

3. AI Focus

Our AI automates labor-intensive accounting tasks like data entry, bank reconciliation, and document processing, allowing accountants to focus on strategic financial decision-making.

Not a single accounting system in the world uses AI at the core right now, we're the only ERP started after the launch of ChatGPT-3.

Key AI Features

- Automated Reconciliation: AI suggests transaction matches to streamline bank reconciliations
- OCR & Data Extraction: Intelligent character recognition for accurate document data entry
- Conversational Interfaces: Chat-based queries for financial records — like having a virtual tax advisor

See our website: <https://www.dualentry.com/scale/automated-accounting-software>

4. Teams

We have 2 offices: one in the World Trade Center in New York, and one in Austin, Texas. About 50% of our team is working remotely, the other 50% are working out of one of our two offices.

Our product & engineering org

- Backend (Europe, USA)
- Frontend (Europe, USA)
- Product (USA)
- QA (Europe)
- Product Design (Asia & USA)
- Data (USA)

Check out our Careers page for more info: <https://www.dualentry.com/career>

5. Technology and Development

Tech Stack

- Backend: Python Django on AWS with PostgreSQL
- Frontend: React + Next.js
- Hosting: AWS with Terraform

Development Process

- Weekly sprints with demos and grooming sessions
- Engineers involved in a full CI/CD process, with daily deployments to production
- Cloud-based deployment on AWS
- DevOps handled by backend engineers; QA support included

6. Team and Work Culture

What we value most is velocity - speed of moving forward.

Working at DualEntry is hard work; we move very fast. Many candidates are not comfortable with our pace. You will be challenged.

The payoff is big - many of our team members have made significant gains since joining, both financially and skills/career growth. We are building one of the hardest B2B softwares in the world. We demand a lot.

Company Size

60+ people across engineering, design, sales, product, HR, accounting and marketing/GTM.

Headquarters

New York (HQ)

Financial Expertise

Dedicated CPAs as product experts, in-house CFO.

Time Zones & Core Working Hours

To ensure overlap with New York leadership, Engineering, HR, and Product teams follow these core synchronous hours:

EST: 9:00 AM – 6:00 PM (working hours)

CET: 2:00 PM – 7:00 PM (core overlap hours)

IST: 7:30 PM – 1:30 AM (core overlap hours)

Important: Weekend work is required based on project needs. We usually work at least 2 weekends out of 4 to make progress. Our competition is simply too large and we can't risk falling behind.

Time Off

- 15 days PTO + 12 flexible public holidays (27 days total) across the USA and Europe
- Sick days granted as needed
- To help maintain project momentum, we ask that no more than 2 consecutive weeks be taken at a time

Employment Arrangements

- Regular employment or B2B contracts - both options available
- B2B contractors submit monthly invoices; paid within 2-5 days
- Notice period: coordinated individually for a smooth transition

7. Compensation, Benefits & Perks

Equity & Bonuses

Equity is the main reason team members join us. We believe we do our best work when we think and act like owners. Thus, everyone has to be an owner. This ownership mindset is key to our success.

We offer a standard startup equity plan (4-year vesting, 1-year cliff).

Benefits & Perks

- Health, dental, and vision insurance (region-specific)
- Reimbursements for equipment, software, or home office setup
- Paid time off, holidays, and sick days
- Flexible work arrangements and remote work support (region-specific)

- Enjoy a learning & development budget for courses, certifications, and language learning to keep growing your skills.
- Work where you feel most productive at co-working spaces or from your home office with support for setup, internet, and phone.
- Plus, wellness perks and more to make your workday even better!!!!

8. Onboarding

From day one, you'll be actively contributing - our goal is for you to start building from Day 1. If you're an engineer, you push your first PR on your first day. If you're a marketer, you run your first ad creative on your first day. You get right into work and start running:

- Hit the ground running
- Own your function and your team's growth
- Make an immediate impact on your first day

We're excited to
have you on this
journey with us.

We'll be in touch soon!
