

Take Home Case Study

The Challenge:

At Glean, we spend a lot of time thinking about what the future of work should look like for every knowledge worker. We believe the most transformative products don't just make existing work faster—they fundamentally reimagine what's possible.

Your task:

Pick any job function in any industry. Design an AI-powered product that would fundamentally transform how that role creates value—not just incremental improvement, but a step-function change in what they can accomplish.

State any assumptions you have about what is realistically possible technologically in 12 months (i.e., don't constrain yourself to how LLMs function today, Glean's capabilities today, etc.).

We want to see bold product thinking grounded in deep understanding of a real problem.

Please reach out to malik.ismail@glean.com if you have any questions.
