

Executive Summary

This protocol targets the acquisition of **30,000 high-value leads** across three distinct verticals. It abandons low-yield content marketing in favor of high-leverage assets: **Compute Infrastructure** (for Developers), **Regulatory Data** (for Finance), and **Conversational Virality** (for Prosumers).

- **Total Target:** 30,000 Leads (14-Day Sprint)
- **Blended CAC Goal:** <\$4.00
- **Core Strategy:** Divert budget from "impressions" to "infrastructure" and "direct data acquisition."

Vector A: ML Engineers (US and EU)

The Acquisition Engine: The "Season of Code" Hackathon

Instead of a standard webinar, host a rolling hackathon focused on building agents.

- **The Hook:** Partner with **Lambda Labs** or **RunPod** to offer significantly subsidized compute credits (e.g., \$5,000 in credits for winners). This filters for serious engineers rather than hobbyists.
- **Tiered Entry:**
 - *Entry Level:* \$500 micro-grants for valid API usage (Volume play).
 - *Pro Level:* Access to reserved H100 clusters for teams demonstrating novel architectures (Quality play).

The Distribution Channels

- **AlphaSignal:** The primary channel for "Prestige." Target their 200k+ technical readers with code-heavy ad creative (e.g., "Fine-tune Llama-3 on H100s").
- **TLDR AI:** The primary channel for "Volume." Use secondary placements to drive mass clicks to the hackathon landing page.
- **Community DevRel:** Engage primarily on Reddit (r/LocalLLaMA) and Discord. Adopt a "Build in Public" ethos by sharing internal benchmarks rather than marketing copy.

Vector B: Investment Bankers (US)

The "Regulatory Scrape" Pipeline

Financial professionals are mandated to register with federal bodies. This data is public and more accurate than LinkedIn.

- **Source 1: FINRA BrokerCheck:** Scrape for individuals holding **Series 79** (Investment Banking) and **Series 63** licenses. This isolates active Investment Bankers.
- **Source 2: SEC IAPD:** Scrape Form ADV filings to identify Registered Investment Advisers (RIAs) by Assets Under Management (AUM).

Waterfall Enrichment & Outreach

- **The Logic:** Raw names/firms from FINRA are fed into **Clay.run**.
- **The Waterfall:**
 1. **Apollo.io:** Match Name + Firm Domain to find verified *corporate* emails.
 2. **Validation:** Verify deliverability to prevent bounce-rate blocks.
 3. **Strict Compliance: Do not** target personal emails (Gmail/Yahoo) for business outreach to avoid FINRA/GDPR violations.
- **The Sequence:** Deploy via **Instantly.ai** (Light Speed plan) using rotating IPs. A 4-step sequence focusing on "Automating M&A Due Diligence" consistently yields higher open rates than generic sales pitches.

Air Cover

- **Wall Street Oasis (WSO):** Run "Daily Peel" newsletter ads during the outreach campaign. When bankers receive the cold email, they will already recognize the brand from the WSO feature.

Vector C: Voice Artists (Mexico)

The Click-to-WhatsApp Funnel

Direct Facebook/TikTok ads to a WhatsApp conversation, not a landing page.

- **Ad Creative:** Partner with Mexican "Fandub" influencers (e.g., **Lalo Garza, Braulio Rod**) to encourage users to "audition" their voice against an AI.
- **Cost Efficiency:** WhatsApp marketing messages in Mexico cost ~\$0.035, making this highly scalable.

The Automated Voice Bot (Technical Spec)

This system replaces human recruiters with an AI agent orchestrated via **Make.com**.

1. **Ingestion:** User sends a voice note via WhatsApp.
2. **Processing (Deepgram):**
 - Use **Deepgram Nova-3** (Spanish) for transcription.
 - **Crucial:** Enable endpointing=500 (500ms silence detection) for natural turn-taking.
 - **Intelligence:** Use Sentiment Analysis to tag "High Intent" users (e.g., those speaking seriously vs. pranking).
3. **Response:**
 - Generate a reply via LLM.
 - Convert text-to-speech (Deepgram Aura).
 - **Format:** Convert audio to **OGG (Opus codec)**. This is required for the file to play natively in WhatsApp with a waveform UI.

Consolidated Budget

Total Estimated Budget: ~\$98,000

Phase	Action Item	Est. Cost	Target Metric
Days 1-3	Setup: Configure Instantly.ai (IP Warmup), Make.com (WhatsApp API), and Deepgram Keys. Scrape FINRA data.	\$5,000	Infrastructure Ready
Days 4-7	Launch (Finance): Start Cold Email Drip (1k/day). Launch WSO Ads.	\$15,000	20% Open Rate

Days 4-7	Launch (Devs): Announce Hackathon on AlphaSignal & TLDR.	\$30,000	2k Signups
Days 8-14	The Surge (Viral): Activate TikTok Influencers & WhatsApp Ads.	\$28,000	10k Conversations
Variable	Compute Grants: Credits for Hackathon Winners (Lambda/RunPod).	\$20,000*	High-Fidelity Usage
